Smart Student Record Manager (CLI)

Confidence Amarachi Nkeonye

Python Internship Project

Problem

Managing student records manually can be:

- Time consuming
- Error prone
- Difficult to search and update

Solution

A CLI based system that:

- Stores student data efficiently
- Allows easy updates and retrieval
- Supports intelligent search using natural language

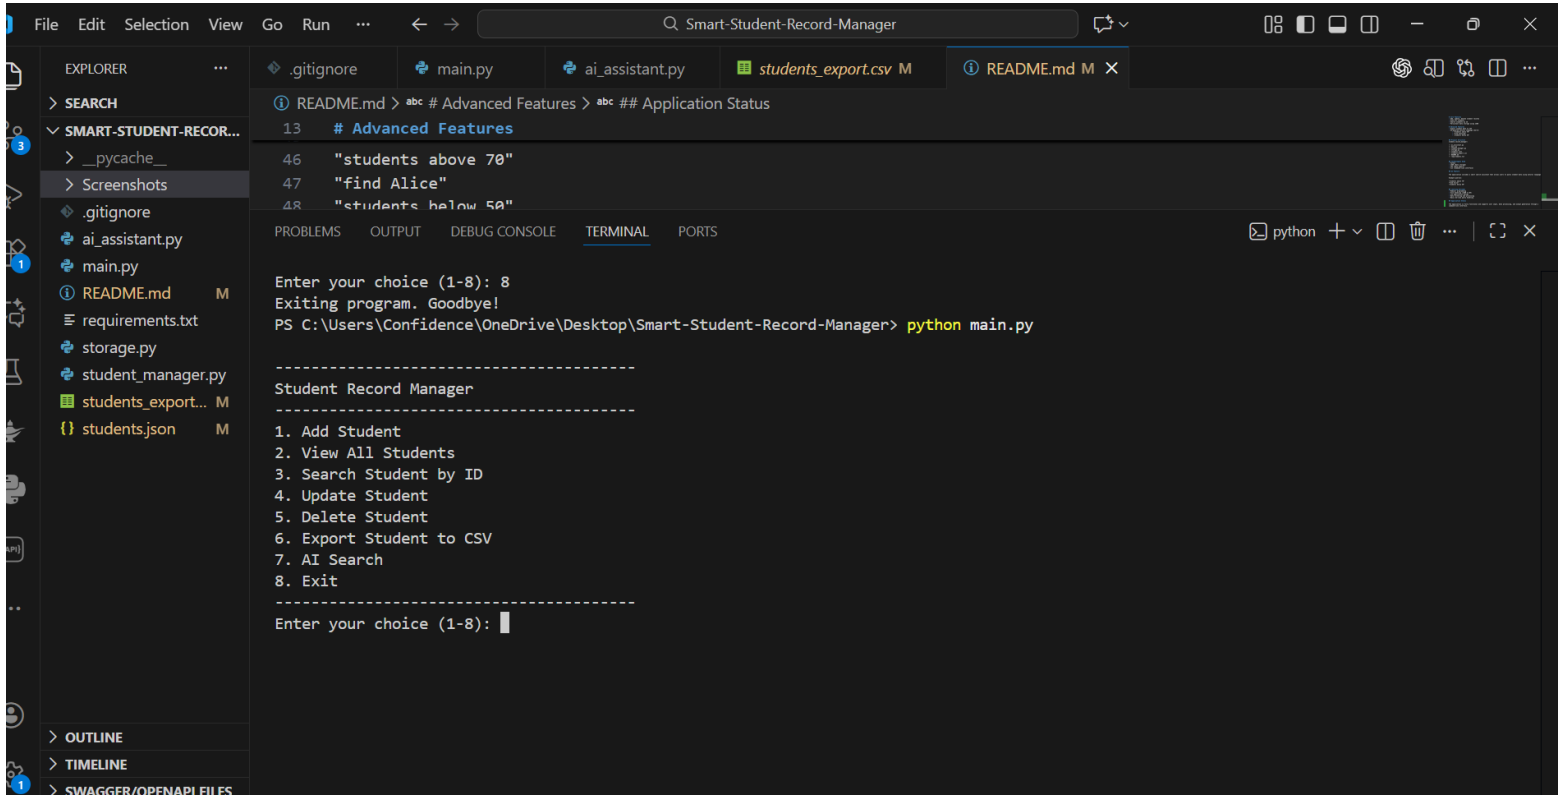
Features

- Add, update, delete students
- View and search records
- JSON data storage
- CSV export
- AI powered search

System Design

- Main.py - User interaction
- Student_manager.py - Core logic
- Storage.py - Data handling
- Ai_assistant.py - AI search

Application Output



Key Achievements

- Built a modular system
- Implemented persistent data storage
- Added AI powered search
- Designed like a real backend system

Conclusion

This project demonstrates my ability to:

- Build real world applications
- Handle and process data efficiently
- Design structured and scalable systems
